

Dear FCC:

We very much support XM Satellite Radio and its traffic and weather channels. We travel and there are many areas where you cannot get reception on the regular radio. I think it is very much a safety issue because when traveling through the desert there is no way to be warned of flash floods or road detours and there is a lot of desolate highways. It is great to hear what is going on and we feel much safer in addition to enjoying up to date news as we travel along. Please reject the NAB's petition 04-160 and support XM's ability to provide the kind of programming that meets the needs of the people.
